Introduction

Meta is releasing a new update for WhatsApp. The current release, version 2.3, includes new features, enhancements, and bug fixes.

What's New

This section contains the new features and enhancements.

New Features

Release 2.3 introduces two new features to enhance the user experience.

1. **Payments:** Payments enable easy and secure transactions. This feature allows you to send and receive money directly through WhatsApp using the Unified Payments Interface (UPI).
2. **Meta AI:** Meta AI is a computer program designed to learn and improve continuously, which is added to the home screen. This feature optimizes your user experience by providing relevant information and answering your questions.

Enhancements

This release includes two enhancements. Here is a complete description of the enhancements performed in WhatsApp.

1. **Meta AI Smart Replies:** WhatsApp now suggests AI-powered replies based on your conversation, making your response quick and easy.
2. **Message Editing:** You can now edit your sent messages within 15 minutes of sending.

Issues Fixed

Release 2.3 fixes the following issues:

1. **Fixed message sync issue:** Resolved a bug that caused a message sync issue between WhatsApp mobile and WhatsApp web applications.
2. **Fixed call disconnection issue:** Resolved a bug that caused the sudden disconnection of WhatsApp audio calls.

Known Issues

Unable to Download Media

Problem: Media download issue

Description: While trying to download media files from WhatsApp, it failed.

Solution: Sign out, then sign back in and try again.

If the problem persists, please contact support.

GIF Render Issue

Problem: GIF loading issue

Description: While trying to search for a GIF in chats, it took more time to load.

Solution: Clear the cache from the settings and try again.

If the problem persists, please contact support.
